Main body of text, first paragraph.

Main body of text, second paragraph.

Main body of text, third paragraph.

The following table shows the results of the experiment. The first column is the number of trials, the second column is the number of correct responses, and the third column is the percentage of correct responses. The data shows that the percentage of correct responses increases as the number of trials increases, indicating that the subject is learning the task.

The results of the experiment show that the subject is able to learn the task over time. The percentage of correct responses increases from approximately 50% in the first trial to approximately 90% in the final trial. This suggests that the subject is able to learn the task through practice.

The graph shows the percentage of correct responses over a series of trials. The x-axis is labeled 'Trial' and the y-axis is labeled 'Percentage of Correct Responses'. The data points are approximately: Trial 1: 50%, Trial 2: 60%, Trial 3: 70%, Trial 4: 80%, Trial 5: 85%, Trial 6: 88%, Trial 7: 90%, Trial 8: 90%, Trial 9: 90%, Trial 10: 90%. The graph shows a clear upward trend that levels off after about 5 trials.
