The first stage is a common-emitter amplifier. It consists of a base bias network with resistors R_1 and R_2 connected to the base of the first transistor. The base-emitter junction is shown, and an emitter bypass capacitor C_E is connected to the emitter. The collector is connected to a collector resistor R_C and a coupling capacitor C_C .

The second stage is a common-emitter amplifier. It consists of a base bias network with resistors R_3 and R_4 connected to the base of the second transistor. The base-emitter junction is shown, and an emitter bypass capacitor C_E is connected to the emitter. The collector is connected to a collector resistor R_C and a load resistor R_L .
