

Answer

- 1. The first part of the question is about the definition of a function. A function is a relation between a set of inputs and a set of possible outputs, where each input is related to exactly one output.
- 2. The second part of the question is about the domain and range of a function. The domain is the set of all possible inputs, and the range is the set of all possible outputs.
- 3. The third part of the question is about the graph of a function. The graph of a function is a set of points in a coordinate plane, where each point represents an input-output pair.
- 4. The fourth part of the question is about the properties of a function. A function must satisfy the vertical line test, which means that no vertical line can intersect the graph of the function at more than one point.
- 5. The fifth part of the question is about the composition of functions. The composition of two functions is a new function that is formed by applying one function to the output of another function.
