

1. Introduction
 This report is intended to provide a detailed analysis of the project's progress and to identify any areas that require further attention. The project has been completed on time and within budget, and the results are highly satisfactory.

2. Methodology
 The project was carried out using a combination of qualitative and quantitative methods. Data was collected through interviews, surveys, and focus groups. The data was then analyzed using statistical software and thematic analysis.

3. Results
- a. The majority of respondents (75%) reported that they were satisfied with the project's progress.
 - b. The most common reason for dissatisfaction was the lack of communication between the project team and the stakeholders.
 - c. The project was completed on time and within budget.
 - d. The results of the project are highly satisfactory.

4. Conclusion
 The project has been completed successfully and the results are highly satisfactory. The project team has demonstrated excellent communication and collaboration throughout the project. The results of the project are highly satisfactory and will be used to inform future projects.

5. Recommendations
 Based on the findings of this project, the following recommendations are made:

QUESTION

1. The first part of the question is to find the value of the function $f(x) = \sin^{-1}(\sin x)$ for $x \in [0, 2\pi]$.
2. The second part is to find the value of the function $f(x) = \cos^{-1}(\cos x)$ for $x \in [0, 2\pi]$.

SOLUTION

1. For $f(x) = \sin^{-1}(\sin x)$, we know that $\sin^{-1}(\sin x) = x$ for $x \in [-\frac{\pi}{2}, \frac{\pi}{2}]$. For $x \in [\frac{\pi}{2}, \frac{3\pi}{2}]$, we have $\sin^{-1}(\sin x) = \pi - x$. For $x \in [3\pi/2, 2\pi]$, we have $\sin^{-1}(\sin x) = x - 2\pi$.
2. For $f(x) = \cos^{-1}(\cos x)$, we know that $\cos^{-1}(\cos x) = x$ for $x \in [0, \pi]$. For $x \in [\pi, 2\pi]$, we have $\cos^{-1}(\cos x) = 2\pi - x$.

3. The third part of the question is to find the value of the function $f(x) = \tan^{-1}(\tan x)$ for $x \in [0, 2\pi]$. We know that $\tan^{-1}(\tan x) = x$ for $x \in (-\frac{\pi}{2}, \frac{\pi}{2})$. For $x \in (\frac{\pi}{2}, \frac{3\pi}{2})$, we have $\tan^{-1}(\tan x) = x - \pi$. For $x \in [3\pi/2, 2\pi]$, we have $\tan^{-1}(\tan x) = x - 2\pi$.

Handwritten notes:
The first part of the question is to find the value of the function $f(x) = \sin^{-1}(\sin x)$ for $x \in [0, 2\pi]$.

Handwritten notes:
The second part is to find the value of the function $f(x) = \cos^{-1}(\cos x)$ for $x \in [0, 2\pi]$.

Handwritten notes:
The third part of the question is to find the value of the function $f(x) = \tan^{-1}(\tan x)$ for $x \in [0, 2\pi]$.
