A 10x10 pixel grayscale image showing a highly noisy pattern of dark and light gray pixels. The image consists of a grid of 100 individual pixels, each with a value ranging from black (0) to white (255). The noise is distributed randomly across the entire area, with no discernible shape or structure.

A 10x10 grid of grayscale pixels. The background is mostly white with scattered gray pixels. In the center, there is a handwritten digit '4' in a dark gray shade. The digit has a vertical stroke on the left, a shorter vertical stroke on the right, and a horizontal stroke connecting them. There are a few bright white pixels: one at the top of the left vertical stroke, one at the bottom of the right vertical stroke, and one small cluster of three pixels inside the central horizontal loop of the digit.

A horizontal strip of 100 grayscale pixels. It consists of several dark gray rectangular blocks of varying widths, separated by white spaces. The pattern repeats approximately every 10 pixels.

A horizontal strip of a grayscale image showing a dark, textured band with a central black pixel.

-

- A 4x4 grid of 16 small, square grayscale images. Each square contains a different pattern of horizontal and vertical bars of varying shades of gray. The patterns are arranged in a staggered, non-overlapping manner across the grid.

A 10x10 grid of grayscale pixels. The first few columns show a small, dark, roughly triangular cluster of pixels. This is followed by a larger, more structured dark rectangle spanning approximately columns 4 to 8. The final few columns show a very dense, noisy dark area. The overall pattern suggests a sequence of three distinct visual elements or states.

-

-

A horizontal bar chart with 10 categories. The x-axis is labeled 'Category' and ranges from 1 to 10. The y-axis is labeled 'Value' and ranges from 0 to 10. Category 1 has a value of approximately 1. Category 2 has a value of approximately 2. Category 3 has a value of approximately 3. Category 4 has a value of approximately 4. Category 5 has a value of approximately 5. Category 6 has a value of approximately 6. Category 7 has a value of approximately 7. Category 8 has a value of approximately 8. Category 9 has a value of approximately 9. Category 10 has a value of approximately 10. The bars are dark grey.

A 10x10 pixel grayscale image showing a highly noisy pattern of dark gray and black pixels against a white background. The noise is distributed throughout the entire area, with no discernible shapes or patterns.

-

The image consists of four sequential frames of a video. The first frame is very blurry and noisy, showing dark shapes against a light background. The second frame shows more distinct features, possibly a person's head, though they are still somewhat obscured by noise. The third frame is much clearer, revealing a person's face with dark hair and a light-colored shirt. The fourth frame is the most clear, showing a sharp profile of a person's head and shoulders.

A horizontal strip of 10 grayscale images showing a sequence of frames from a video. The images show a dark, textured object moving across a light background. The sequence starts with a small, dark, irregular shape on the left and ends with a larger, more defined rectangular shape on the right.

As a result, the first two rows of the matrix \mathbf{A} are zero vectors, and the remaining $n-2$ rows form a $(n-2) \times n$ matrix where each row has exactly one non-zero entry, which is 1, at the i -th position where $i \in \{3, 4, \dots, n\}$. This structure ensures that the matrix \mathbf{A} is singular.

A 4x10 grid of 40 grayscale images showing a sequence of frames from a video. The images show a dark, textured object moving across a light background. The sequence starts with a small cluster of pixels on the left and ends with a large, elongated cluster on the right.

This image is a horizontal strip from a larger grayscale video frame. It shows a person from the chest up, wearing a dark shirt. The person's face is very blurry and indistinct. The background is also dark and lacks clear details. The overall quality is low, suggesting a poor signal or a very old camera.

The image consists of a horizontal sequence of 10 small, square grayscale frames arranged side-by-side. Each frame shows a different state of a process, starting from the left where the image is very dark and noisy, and transitioning through various stages of increasing brightness and clarity. The final frame on the right is very bright and clear, suggesting a successful completion or a final state.

- The image consists of a 10x10 grid of 100 small square images, each containing a different pattern of black and white pixels. The patterns vary from solid black or white to more complex, scattered, or striped designs. Some images have a central dark horizontal band, while others feature vertical streaks or diagonal patterns. The overall effect is a collection of abstract, low-resolution visual samples.

The image consists of a horizontal sequence of five square grayscale patches. From left to right, the patches show a transition: 1) A blurry background with dark, vertical, elongated shapes. 2) The same background with a single, darker, more defined shape appearing in the center. 3) The background becoming clearer, with several distinct, darker shapes appearing. 4) The background becoming very clear, with a few large, dark, roughly circular shapes. 5) A sharp, clear image of a dark, irregular object against a white background.

A 28x28 pixel grayscale image showing a highly noisy and distorted digit. The digit itself is a dark gray shape, roughly triangular in outline, positioned in the center-left area. It is surrounded by a dense field of white and light gray pixels, representing noise. There are also several darker, irregular shapes scattered across the image, particularly towards the right side, which appear to be artifacts or additional noise.

A highly pixelated, black and white image of the Seal of the Commonwealth of Massachusetts. The seal features a central shield depicting an Algonquian Native American holding a bow and an arrow pointing downwards. Above the shield is a crest showing a bent arm holding a broadsword. A five-pointed star is located in the upper left corner of the shield. Above the shield is a scroll with the state motto 'Ense petit placidam sub libertate quietem'. A five-pointed star is also present in the upper left corner of the shield.
