

Perspective of Informal Education in Engineering in India

M. K. Varshaney

F.I.S.C.E., M.I.E., M.I.W.R.S., M.I.P.H.E. Lecturer/Civil Engg., D. N. Polytechnic, Meera (U.P.)
250103, Mob. No. : 9412631163 (M/128351/5)

Since independence number of post secondary school leaves are gradually increasing hence a problem has been created to absorb them into higher educational institution in various disciplines under formal & non-formal mode. Arts, Commerce, Science, Management, Law, Information Technology, Medical Transcription, Paramedical, C.A., C.S., ICWA, Medical & Engg. various streams are there to be chosen, but Engg. has set aside its value hitherto because of existing of massive job prospects, analytical profile, pragmatic approach, viable thoughts and corresponding work output for which full infrastructures regular engg. reputed institutions were setup in many more quantum and also non to and fro pattern of learning professional bodies have established throughout the nation conferring vivid mode of higher education. Some where O.U.S. pattern was adopted and some where non formal conferring equivalent degree programs. Due to Conferring original degree from regular programs has now encroaching the equivalent degrees hence the equivalence certificate bearers existence did not seem withstanding more. Hence by the time being, non formal educational bodies should uplift their status similar to U.G.C. act 1956, sub-act 2f/3 or appropriate state legislative act. So that U.G.C. may accord the status of Deemed University to individual professional bodies. So as their existence would live consistently in present & ensuing period.

Self curing concrete : An Innovative Technology

S. K. Chaudhary

Head Estimator, E. Co. Railway, Walaair

Curing of concrete has been a matter of great concern for Civil Engineering fraternity through out the world because it plays very important role in developing strength and performance of concrete. But practically curing can not be ideal. Curing becomes very difficult in a special circumstances, such as Repair works in manufacturing plant, chemical factory which can not be shut down for considerable time. Patching of
